

# SCOTT DUTTON★

## AV + VENUE

### MICROPHONE

Scott prefers a lapel microphone.

### SPACE

Scott walks around the stage so space is required to do so.

### POWERPOINT PRESENTATION

Scott uses PowerPoint that includes videos – high quality sound is important.

### FOLDBACK MONITOR

Scott requires a foldback monitor on the ground in front of the stage to view the current PowerPoint slide + the next slide / presenter notes.

### AHASLIDES

Scott uses the Ahaslides app for polling / word clouds / quiz at the end – capacity for results to be shown live is required. Scott will give the tech team his user name + password. Also, the ability to move between the live polls (on a browser) + the PowerPoint presentation.

Delegates will require their mobiles (and if phone reception is poor connection to wifi) to complete polls / quiz during the presentation (preferably with a QR code reader!)

### CONTACT WITH AV / TECH TEAM

Scott will need the contact details of the AV / tech team to discuss his requirements prior to the presentation.

### ROOM SET-UP

It helps if you use theatre style seating without tables – it allows for greater capacity to move around for the activities!

### LAPTOPS

It would be appreciated if the MC (before reading out Scott's intro) can request people close laptops so they can be present – it is a highly interactive keynote so full focus is requested!

Thanks – super-excited + looking forward to some (conflict) fun!
